

# SIROMER Equipment

**Your Tractor's Best Friend**

## **BELT RAKE**

Compact hay rake which is rugged and light weight so doesn't need much horsepower to operate. Complete with three rows of double tines giving 36 double tines. The tines never touch the ground, meaning you won't end up with dirt in your bales.

This style of hay rake is the only hay rake which rakes in reverse, which is very handy for small fields with lots of corners. The hay is delivered at one side by the combs, whose movement is at a right angle to forward travel. The hay remains soft and untangled for faster drying. The combs are attached to the twin v-belts with permanently lubricated bearings for quiet and smooth operation.

The Siromer belt rake can turn hay, deliver hay at the side making windrows and spread windrows.

The belt rake is to be used for turning and raking grass/hay only, heavier material will require the Siromer hay rake.

MODEL	Overall Width	Working Width	Tyres	Tedder Efficiency	Rake Efficiency	HP Required	Weight
P31	2.45m	2.1m	15 x 6.00-6	5 acres/hr	4.5 acres/hr	16 - 50	220kg
